## Segment: Anti-infectives

# Favipiravir: India's first oral treatment for COVID-19

# What is COVID-19?

The coronavirus COVID-19 has effected 213 countries and territories around the world. Nearly 12.5 million cases of the novel coronavirus have been detected across the world, with as many as 559,000 people succumbed to the disease.

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus. Most people infected with the COVID-19 virus experiences mild to moderate respiratory illness. Older people, and those with underlying medical problems like cardiovascular disease, diabetes, chronic respiratory disease, and cancer are more likely to develop serious illness.

## How does it spreads?

Droplets of saliva Discharge from the nose

When an infected person coughs or sneezes, they release droplets of saliva and discharge from the nose which can hover in the air after a person has passed.

The average number of people that one person with COVID-19 infects: 2–2.5

Infected person Average people infected

## Signs and symptoms

# COVID-19 in India : Number of Cases and Deaths

India is the third worst-hit nation by the COVID-19 pandemic. The disease has expanded its footprint in the country and has affected more than 10 lakh people.

COVID-19 cases in India as of July 2020

  
**411133**  
Active Cases

  
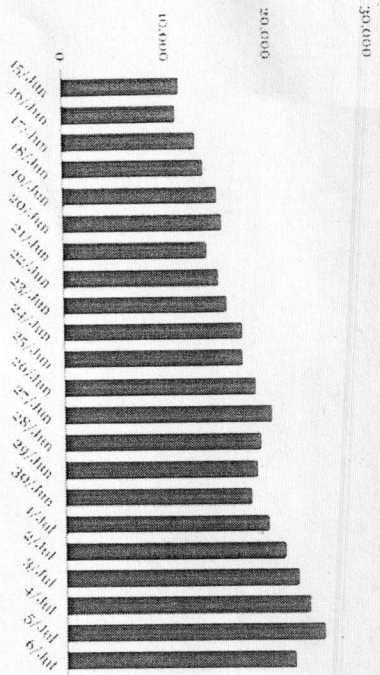

**753049**  
Cured / Discharged

  
**28732**  
Deaths

  
**1**  
Migrated

The total number of infections in India has crossed 1 million figure

## Number of New Cases Every Day

Cumulative confirmed COVID-19 deaths  
Limited testing and challenges in the attribution of the cause of death means that the number of confirmed deaths may not be an accurate count of the true number of deaths from COVID-19  
(Lancet) 100.

## Coronavirus: India overtakes Russia in Covid-19 cases

03 June 2020

Coronavirus pandemic

f o v e S

For the last three days, India has added more than 20,000 daily infections per day

CELEBRITIES

India has recorded more than 24,000 new cases of Covid-19 in the past 24 hours, taking its total above that of Russia.

The World Health Organization has reported that India is the second most affected country in the world, with more than 18,600 deaths.

The latest surge in infections was also linked to a rise in cases from a number of countries, including Tamil Nadu and Karnataka.

India's coronavirus spreading centres, places of worship and offices, are now open.

For the last three days, India's case load has increased at an alarming rate, adding more than 20,000 daily infections per day.

Although India now has the highest number of cases, it is still far from reaching the levels of the United States, which has more than 1 million cases.

Several Indian states have managed to keep infections at bay.

But some states are reporting infections in the south - Karnataka, Tamil Nadu, Andhra Pradesh and Telangana - are growing faster than the national growth rate, reported The Indian Express newspaper.

## Coronavirus: Is India the next global hotspot?

By Anand Kumar, The Indian Express

03 June 2020

Coronavirus pandemic

f o v e S

The coronavirus took hold slowly in India, but six months after its first confirmed infection it has overtaken Russia to record the world's third largest case load.

With the world's second largest population, much of India has been locked and closed, the country was perhaps always destined to become a global hotspot.

But the data behind the case numbers is questionable, because India is not testing enough and an unusually low death rate has baffled scientists.

There is too little data about the spread of coronavirus in India.

### 1. India's cases are rising fast

India has seen a series of record spikes recently, setting new records of cases daily. It recorded more than 24,000 new cases in June, with more than 20,000 daily deaths.

As of 6 June, India had 122,217 confirmed cases.

## Favipiravir: A unique COVID-19 treatment

There is a stark rise in the cases of novel coronavirus (COVID-19). Till now, there are no specific vaccines available. Therefore, it is urgently needed to identify effective antiviral agents to combat the disease.

**Favipiravir** is a broad-spectrum antiviral drug approved in Japan since 2014 for influenza. It is currently being tested in 18 clinical trials for Covid-19 and results have shown a positive outcome.

It has a unique mechanism of action by which it inhibits viral replication. It inhibits the RNA-dependent RNA polymerase: an enzyme that allows the coronavirus to replicate inside host cells.

In a prospective, randomized, multicenter study, Favipiravir was compared with Umifenovir for the treatment of moderate and severe COVID-19 infections. Differences in clinical recovery were 71.4% in favipiravir and 55.9% in Umifenovir.

Favipiravir lead to faster improvement in the general health and clinical condition of the patients which may lead to earlier discharge from hospital and reduce the burden on medical facilities.

In comparison to LPV/RTV, those treated with favipiravir appeared to have faster viral clearance and better chest imaging change than patients treated with LPV/RTV.

**Russia's Ministry of Health** announced that Favipiravir is the world's first drug to be approved for the treatment of COVID-19.

**Favipiravir** is the gold standard treatment for reducing complications associated with COVID-19.

# Favipiravir 200mg Tablets: Unlocking the Oral Antiviral

Favipiravir is a broad-spectrum antiviral drug and effective in COVID-19 patients with mild to moderate symptoms.  
It provides relief to patients by rapidly reducing the viral load within 4 days of administration

## Key features of our formulation

- Better rate of clinical recovery as compared to Umifenovir
- Quicker relief from cough and fever.
- Rapid reduction in viral load
- Improvements of upto 80 % in Covid-19, with rapid reduction in viral load by four days
- Available in tablet form, hence easy to use
- It prevents viral replication and reduce the risk of progression of the disease thereby cutting down on the need of hospitalization

## Dosing schedule

	Day 1	Day 2 to max 14 days
Total Daily Dose	1600 mg BID	800 mg BID
Morning	200 mg x 9 tabs	200 mg x 4 tabs each day
Evening	200 mg x 9 tabs	200 mg x 4 tabs each day

Approved for use in mild to moderate COVID-19 in India
